

Project Initialization and Planning Phase

Date	14 July 2026
Project Name	Strategic Product Placement Analysis
Maximum Marks	3 Marks

Introduction:

Product placement plays a crucial role in influencing customer purchasing decisions and improving overall sales performance in the retail industry. Businesses collect large volumes of data related to product categories, pricing, competitor pricing, promotional campaigns, seasonal demand, and consumer demographics. However, this information is often stored in spreadsheets or static reports, making it difficult to identify meaningful business insights.

The **Strategic Product Placement Analysis** project aims to analyze retail product data using Tableau Public Desktop to understand the relationship between product placement, consumer behavior, pricing strategies, and sales performance. Interactive dashboards and stories are developed to help retailers identify effective product placement strategies and support data-driven decision-making.

Problem Statement :

Retail organizations often struggle to determine which product placement strategies generate higher sales and customer engagement. Although sales data is readily available, traditional reporting methods provide limited analytical capabilities and do not allow interactive exploration of business information.

Decision-makers require an intelligent visualization system capable of comparing product categories, promotional activities, pricing strategies, and consumer demographics through interactive dashboards. Such a system enables businesses to identify high-performing products, optimize marketing campaigns, and improve revenue growth.

Customer Problem Statement :

The Customer Problem Statement template helps identify challenges faced by different stakeholders and understand their requirements. This approach enables the development of a solution that provides meaningful visualizations and business insights.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	RetailSales Manager	Analyze how product placement influences sales performance.	The available sales reports are difficult to interpret.	They lack interactive dashboards and comparative analysis..	Frustrated while making inventory and marketing decisions..
PS-2	Marketing Analyst	Understand consumer purchasing behavior and promotional effectiveness.	Existing reports provide only static information.	They do not support dynamic filtering and visualization.	Uncertain while planning marketing campaigns and product positioning strategies..
