

Solution Requirements

Date	15 July 2026
Project Name	Strategic Product Placement Analysis
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what the solution will do and how well it will perform.

- Functional Requirements (FR) define specific behaviors, functions, or features of the system (what the system should do).
- Non-Functional Requirements (NFR) specify the criteria that judge the operation of the system (how the system should be).

Step 1: Functional Requirements (FR)

S. No	Requirement Category	Requirement Description	Priority
1	Authentication	Users can securely access the Flask application to view dashboards and reports.	High
2	Authorization Levels	Admin can manage data and dashboards, while users have read-only access to reports.	Medium
3	External Interfaces	Integrates the product positioning dataset (CSV), Tableau Public, and the Flask web application.	High
4	Transactions Processing	Retrieve, process, and display product positioning and sales data.	High
5	Reporting	Generate interactive dashboards, a story, and analytical reports on positioning strategies.	High
6	Business Rules	Validate dataset integrity, calculate average sales volume by position/category, and maintain consistent analysis.	High
7	Compliance	Ensure secure handling of retail sales and consumer demographic data.	Medium
8	Other	Support filtering by product position, category, promotion, and consumer demographic.	Medium

Step 2: Non-Functional Requirements (NFR)

S. No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Dashboards and reports should load quickly.	Response time < 3 seconds
2	Scalability	Support future datasets with additional products and categories.	Easy dataset expansion
3	Security & Data Privacy	Protect data access and prevent unauthorized modifications.	Secure data handling
4	Reliability & Availability	Ensure the application and dashboards remain accessible.	99% availability
5	Usability & Accessibility	Provide an easy-to-use interface with responsive dashboards.	User-friendly navigation

6	Other	Maintain clean, reusable, and well-documented code.	Easy maintenance and updates
