

Proposed Solution

Date	15 July 2026
Project Name	Strategic Product Placement Analysis
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) Report

The proposal outlines a Tableau-based analytics solution that investigates how product positioning strategies affect sales performance and consumer behavior, turning raw retail data into actionable, visual recommendations.

Project Overview

Objective	Develop a data analytics solution that analyzes the impact of product positioning on sales performance and consumer behavior using Tableau.
Scope	The project covers data collection, data preparation, Tableau dashboard creation, story visualization, and Flask-based web deployment for product positioning analysis.

Problem Statement

Description	Retail sales, product placement, and consumer demographic data are collected but not analyzed together, making it difficult to identify which positioning strategies are most effective.
Impact	This leads to suboptimal product placement decisions, missed revenue opportunities, and marketing efforts that aren't tailored to the right customer segments.

Proposed Solution

Approach	Collect and prepare product positioning and sales data, analyze it using Tableau calculations and filters, visualize insights through dashboards, and present them through a Tableau Story and an embedded Flask web page.
----------	--

Key Features:

- Interactive Tableau Dashboard
- Tableau Story
- Category-wise & Position-wise Analysis
- Consumer Demographic Analysis
- Promotion & Pricing Impact Analysis
- Flask Web Application

Resource Requirements

Resource Type	Description	Specification / Allocation
Hardware - Computing Resources	CPU/GPU specifications, number of cores	Intel Core i5 / AMD Ryzen 5 (or above), Quad Core Processor
Memory	RAM specifications	8 GB RAM

Storage	Disk space for project files and dashboards	256 GB SSD (Minimum)
Software - Frameworks	Web Framework	Flask
Libraries	Additional libraries	pandas, matplotlib
Development Environment	IDE	Visual Studio Code
Data	Source, size, format	Product Positioning Dataset, 1,000 records, CSV format
